**ID:** 00001

**Name:** EXAMINEE A

**Total Test Scaled Score:** 65

**Scaling Group:** MM/DD/YYYY

**Total Test Percent Correct Score:** 76

---

NBME customized examinations provide medical schools with a tool for measuring students' understanding of a series of content areas defined by each school. Your total test scaled and percent correct scores on this customized examination appear above. Total test scaled scores are scaled to have a mean of 70 and a standard deviation of 8 for the scaling group of examinees selected by your school. The total test percent correct score represents the percentage of items answered correctly on the examination and has been rounded to the nearest whole number.

The performance profile on the following page is provided to aid in self-assessment. It summarizes your performance on the total test and in the content areas defined by your school. The vertical line in the center of the profile indicates the average level of performance in each content area for the scaling group of examinees selected by your school that completed this customized assessment. Areas of relative strength and weakness are indicated by the positioning of the performance bands. The width of each band reflects the precision of measurement for the associated content area; narrower bands indicate greater precision. An asterisk at either end of the performance band indicates that your performance band extends beyond the displayed portion of the scale. Small differences in relative position of bands should not be overinterpreted. If two bands overlap, performance in the associated content areas should be interpreted as similar. Please note that items may contribute to the calculation of scores in more than one content area. As a consequence, caution should be used when interpreting differences in performance across content areas.

The total test scaled score and this performance profile should not be compared to those from other NBME examinations. The scaling group that your school selected for this administration can be compared to other administrations if this same exam that used the same scaling group.
